

Reflections & Symmetry

Line Reflection – moving a 2D figure such that each point appears at an equal distance on the opposite side of a given line.

Orientation – The order in which points are arranged relative to each other in a 2D figure.

A line reflection will reverse the orientation of a figure.

ex: pre-image orientation: $\triangle ABC$ } order of letters
image orientation: $\triangle A'C'B'$ } changes

1. Find the image of quadrilateral ABCD under each transformation:

a. r_{RP}

b. r_{GH}

1c. Is reflection a Rigid Motion? Justify your response by providing evidence to support your answer.
yes a reflection is a rigid motion. Both length and angle measure are preserved.

1d. Is parallelism preserved under reflection? Justify your response.

yes parallelism is preserved under a reflection. $\overline{AD} \parallel \overline{BC}$ and $\overline{A'D''} \parallel \overline{B''C''}$.

2. Graph and label the image of $\triangle DEF$ under each transformation:

a. Reflect $\triangle DEF$ over \overline{GP} .

b. Reflect $\triangle DEF$ over \overline{RP} .

2b. Why is it much more difficult to reflect $\triangle DEF$ over \overline{RP} than over \overline{GP} ? Explain.

The points in $\triangle D''E''F''$ don't all hit the axis nice. The slope of \overline{RP} is not $\frac{1}{2}$ so we can't count across the diagonals of the grid boxes

3. Use a compass and straight edge to reflect $\triangle DEF$ over \overline{RP} .

4.

a. Describe precisely the reflection that would map $\triangle ABC$ onto $\triangle AB'C$.

A reflection of $\triangle ABC$ in the line \overline{AC}

$r_{\overline{AC}}$

b. Describe precisely the reflection that would map $\triangle ABC$ onto $\triangle A'B'C$.

Reflect $\triangle ABC$ over the \perp bisector of $\overline{AA'}$

c. Describe precisely the reflection that would map $\triangle ABC$ onto $\triangle A'B'C$.

Reflect $\triangle ABC$ over the \angle bisector of $\angle ACA'$

Line Symmetry: Having a line of reflection such that a shape can be folded onto itself.

Example: Draw the lines of symmetry for each figure.

1.

2.
